EDUCATION

Indian Institute of Information Technology Sri City
Computer Science B.Tech
CGPA: 7.64

Chittoor, Andhra Pradesh
Dec 2021 - May 2025

EXPERIENCE

Fresh Prints | Full-Stack Engineer

Remote | Jun 2025 – Current

- Engineered a job processing framework using TypeScript, BullMQ queues, and Redis that manages requests to third-party vendor systems, featuring per-provider queue isolation, exponential backoff retries, and sync/async execution modes and eliminating API rate limit violations.
- Developed the No Minimum Order (MOQ=1) feature enabling single-item purchases, projected to capture \$670K+ in previously lost revenue from 66K+ abandoned leads annually. Built CRON-based eligibility engine calculating MOQ for each product using real-time distributor inventory and warehouse availability data.
- Built AI violation detection system to resolve licensing bottleneck affecting 73% of orders with only 31% meeting 48-hour SLA. Automated trademark checks and CLC/Affinity submissions, enabling 70%+ of designs to process without manual intervention.
- Consolidated 300K+ SKUs from dual-system architecture (CMS + database) into unified single source of truth with real-time synchronization, eliminating cross-platform data inconsistencies and enabling non-technical teams to manage product lifecycle independently.

Fresh Prints | Full-Stack Engineer Intern

Remote | Jan 2025 – Jun 2025

- Collaborated with other interns to build the How-To-Mercch page to educate users on the process of creating custom merchandise, improving user onboarding and engagement.
- Shipped 15+ features across client and internal applications in 3-week sprint cycles, including dynamic pricing logic and approval workflows.
- Integrated Mixpanel and Iterable to enable behavior tracking and marketing automation, improving data visibility for the analytics and marketing teams.
- Improved site SEO, performance (LCP/FCP), and accessibility, boosting Lighthouse scores by 32% through lazy loading, semantic HTML, and optimized rendering.
- Worked on critical internal modules like the Quoter and Proof systems, handling dynamic pricing and approval workflows for custom merchandise.

Dhanaay | Full-Stack Developer Intern

Remote | March 2024 - July 2024

- Designed and developed a sales dashboard using Next.js, MUI as the frontend and Fast API as the backend for the customer portal, enhancing user engagement and data visualization.
- Enhanced API performance by up to 25% through database query optimization, significantly improving data processing efficiency.
- Integrated the Master GST API into the platform using nodejs to seamlessly fetch and manage GST data.
- Implemented efficient file handling using Multer and AWS S3.
- Automated token refresh using cron jobs to ensure uninterrupted service and reduce manual intervention.

SKILLS

Programming Languages:	C, Java, Javascript, Typescript, Python, SQL
Libraries/Frameworks:	Reactjs, Redux, Nextjs, Angular, Tailwind, Nodejs, Socket.io, Bull MQ
Tools / Platforms:	Git, Docker, Linux, AWS, Postman, Jira
Databases:	Mongodb, Postgresql, Redis

ACHIEVEMENTS

- Secured 2nd place in the [Fresh Prints Company Hackathon \(2026\)](#) for developing an AI-powered commerce application on ChatGPT that enabled customers to discover products, receive recommendations, and complete purchases through a conversational interface, delivering the MVP in 3 days.

MEDICARE | [Link](#)

React, Node, MongoDB, Redis, Tailwind, Material UI

- **Innovative healthcare platform** for seamless communication between users and providers.
- Coded a **responsive frontend** with React/Redux and Tailwind CSS, and a **scalable backend** with Node.js, Express.js, and MongoDB.
- **Enhanced data efficiency** using indexing and caching for fast data retrieval.
- Implemented **JWT authentication** and efficient session management for secure access.
- **Led the backend team** and collaborated with a team of four developers to successfully build the application.

Ease Tasks | [Link](#)

Typescript, React, MongoDB, Prisma, Shadcn

- Designed and developed a **full-stack Kanban board application** using React, Node.js, and MongoDB, enabling users to **create, manage, and collaborate** on boards, tasks, and subtasks.
- Built **dynamic, interactive UI components** with Shadcn, enabling **drag-and-drop functionality** for cards and columns.
- Integrated **secure authentication and access control** using Passport.js, enhancing user data privacy and protected access to features.

Talkies | [Link](#)

React, Node, MongoDB, Redis, Tailwind

- **Pioneering project** using the movie database API for an engaging movie exploration experience.
- **Implemented caching and optimized data fetching**, reducing response times from **2 seconds to 400 milliseconds**, resulting in a **500% improvement** in performance.
- Employed **lazy loading** to minimize initial page load times and conserve bandwidth for smoother visual exploration.
- Created a **seamless responsive UI** using Tailwind CSS for a consistent experience across devices.
